Rectiverter 2U, 6kVA Integrated System

The Rectiverter 2U 19” Integrated System can be used as a standalone system with bulk AC & DC outputs in telecom applications where a 230/115 V_{AC} and 48 V_{DC} backup is needed.

The total output power for both AC and DC is limited to a total 8 kW. AC and DC output limits can be set according to the connected load, where the limitation for AC load is set to max 6 kVA and for DC load to max 4,8 kW.

As additional options, the measuring and signaling can be widely extended with the I/O Monitor CAN node.

1) Output voltage ranges configured in factory and have individual keying in top chassis

2) AC load has priority. Maximum **available** DC output power and current is dependent on instant AC load and AC input voltage; i.e. maximum 3200 W / 66,4 A at full AC power and nominal input for 230 V_{AC}.

3) If DC port is overloaded pulling the voltage below 43 V the input current may increase above this level.

4) Reduced performance - no over load support, and for 200-240 V_{AC} output THD will increased and maximum output power de-rates (to 970 W for 230 V_{AC} @ 40 V_{DC})
